allego_1__uid0731-18-06-37

post-surgery day not recorded · day 1 post-tether · body weight not recorded · 27.90 h · ZT 9.1 to 13.0 · criterion HUM · QC epoch 10 s

LIFE TIMELINE

VERDICT LADDER

✓ 0 FILE — PASS

Is the recording file physically sound?

100,454,784 samples, 27.90 h

vs data samples == timestamp samples, remainder 0

100,454,784 data samples = 100,454,784 timestamp samples, remainder 0 and 0

✓ 1 IDENTITY — PASS

Which native channels belong to this animal?

EEG C/1 EMG C/2

vs layout derived from the file, never assumed

2 channels resolved from sensors_by_port; 112 wire-free inputs available as an in-file floor

✓ 2 CONNECTION — PASS

Is the electrode connected, judged against wire-free inputs in the same file?

30.3% usable, longest unbroken block 46.3 min

vs 60 Hz < 98.4 uV (p1 of 112 wire-free inputs in this file), rms 10-150 uV, zero railed samples

3,041 of 10,045 epochs usable on every role, with an unbroken block of 46.3 min

✓ 3 SCOREABILITY — PASS

Can the sleep question even be asked?

8.73 h in 2 block(s), r@1min 0.761

vs >= 15 min inside blocks of >= 124 s, within-block r@1min > 0.30, wake 15-90%

longest block 485.7 min; persistence 0.761 against a shuffled 0.011

◐ 4 ARCHITECTURE — PROVISIONAL

What did the animal do?

wake 65.9%, NREM 29.8%

vs no pass mark: this rung reports, it does not judge

no human has scored any epoch, so accuracy is unmeasured; no REM percentage is reportable

? 5 EXPORT — INSUFFICIENT

Can a human check us?

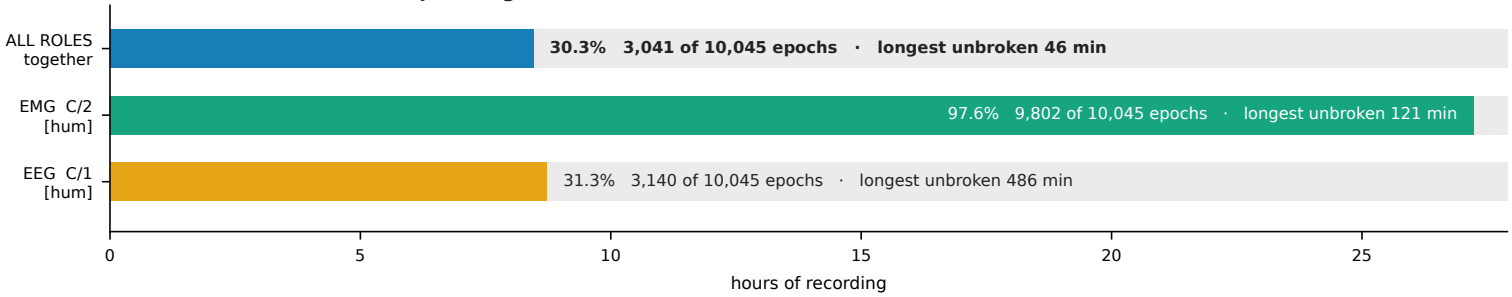

4/4 pipeline artifacts, NO plain text

vs EDF for a scorer, plain text for the professor, both present

missing: plain text (run cards/export_text.py)

A rung is not evaluated if the rung below it failed: it reads BLOCKED. ? INSUFFICIENT means the question could not be asked, which is NOT the same as ✗ FAIL.

RUNG 2 evidence — usable epochs against the in-file wire-free floor

falsification: the same criterion scores the 112 wire-free inputs in this file at 0.88% usable, and must be near zero · floor 60 Hz p1 98 uV, 1-40 Hz slope p1 -3.48

RUNG 4 evidence — how much the wake threshold moves the answer

no threshold sweep in this animal's stage 3 output

READ WITH THE PANEL ON THE LEFT

- PROVISIONAL until a blind-scoring Cohen kappa exists. No human has scored any epoch from this project, so these labels have no known accuracy.
- NO REM PERCENTAGE IS REPORTED: the percentile rule and an independent Otsu cut disagree by roughly a factor of five on this montage.
- Four of the five physiology checks restate the staging rule and cannot fail. Only 'NREM carries the largest amplitude' is informative.

The single most informative animal in the cohort. Best EEG in the fleet on 31 July at 0.465 MOhm, survived deliberate joint-by-joint provocation of its cable, and produced 8.73 h of sleep in one 8.1 h unbroken block with r@1min +0.744, still the highest this project has recorded. Two days later its EEG was electrically open, and it never recorded again even though the impedance returned to a good value on 4 August. A channel can read connected and still record nothing.
